ECOSYSTEM RESTORATION- REIMAGINE. RECREATE. RESTORE

An ecosystem is a geographic area where biotic and abiotic factors work together to form a web of life. The healthier our ecosystems are, the healthier will be the planet and its people.

Activities such as large scale deforestation, pollution of rivers and lakes, overfishing are some of the many factors which are causing a great damage to various living habitats. As we continue to encroach on nature and deplete these vital habitats, the number of species joining the extinction list continue to increase. In order to break this chain of destruction, we all have to come together and play our part to revive and protect our ecosystems.

Under this initiative on the occasion of WED-2021, MCL will be conducting following awareness programs through online mode to avoid the social gatherings in view of COVID-19.

Competitions for World Environment Day 2021

Group	Category of participants	Painting/ Drawing	Essay writing	Waste is the new raw material
Group-I	Class III – IV	Save Water	Forest conservation	Make a video (Time limit:2 to 3 min) showing the process of making the final product/raw material.
Group-II	Class V - VII	Air pollution and its mitigation	Cyclonic storm- Yaas	
Group-III	Class VIII – X	Marine ecosystem	Sustainable energy	
Group-IV	Class XI onwards	Global warming	Beach and ocean cleanup	
Group-V	Executives	Ecosystem and Human	Eco restoration in mines	
Group-VI	Staffs	Covid-19 Pandemic- Impact on the Environment	Extinction of species	
Group-VII	Ladies (Homemakers)	Sustainable living	Sustainable food consumption
